Correction to: Clinical and experimental phenotype of azole-resistant *Aspergillus fumigatus* with a HapE splice site mutation: a case report

Yuya Ito^{1,2}, Takahiro Takazono^{1,2*}, Satoru Koga^{1,2}, Yuichiro Nakano³, Nobuyuki Ashizawa², Tatsuro Hirayama², Masato Tashiro^{1,2}, Tomomi Saijo^{1,2}, Kazuko Yamamoto², Yoshifumi Imamura², Taiga Miyazaki^{2,3}, Katsunori Yanagihara⁴, Koichi Izumikawa³ and Hiroshi Mukae^{1,2}

Correction to: *BMC Infect Dis* (2021) 21:573

<https://doi.org/10.1186/s12879-021-06279-1>

Following publication of the original article [1], the authors identified an error in Additional file 1. The correct file is given in this article.

The original article has been corrected as well.

Supplementary Information

The online version contains supplementary material available at <https://doi.org/10.1186/s12879-021-06667-7>.

Additional file 1: Table S1. Primers used in this study. **Fig. S1.** HapE splice site mutation. The intron site is located between the 297th T and the 343rd G of the *HapE* gene. Originally, the GC-AG site is removed as an intron, but in this case, the terminal G of the intron was mutated to A. If the intron is not removed, the stop codon TAG is generated, and normal protein synthesis is not expected.
